

Dream it. Design it. Achieve it.

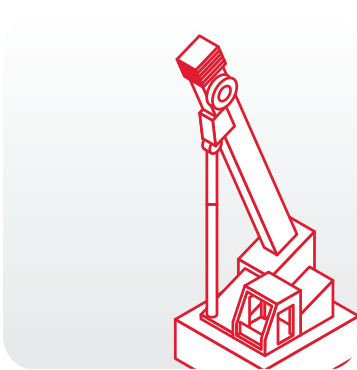

D-Riven Engineered Solutions is a niche services company that Designs, Engineers, Fabricates and Integrates solutions for the industrial sector.

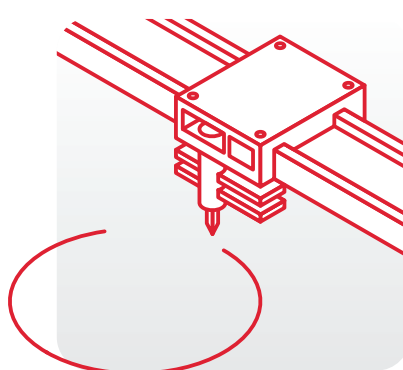

We take on your biggest (and smallest) challenges and solve them proactively using creativity, teamwork and grit. We get to the root of the problem and ensure that our solution adds real value to your bottom line. We dedicate ourselves to finding optimal outcomes for the long term.

We conduct ourselves with the highest level of professionalism, where the safety of our customers and our team is the first priority, and our goal is to get our work right the first time and every time. As a company we strive to perfect our approach to drive efficiency, knowing that every second counts for you and your business.

INTEGRATION

D-Riven's Integration team provides solutions in multiple areas. We take your project from concept to design, installation, integration and production. We execute complete production lines that meet your goals and specifications.

Going above and beyond to provide high quality, safe solutions our Integration team is here to provide a full list of value-added services. To discuss how we can help your company, call our team at [248-297-5352](tel:248-297-5352).

D-RIVEN INTEGRATION SOLUTIONS

- ✓ Mass Production Facility Equipment disassembly, rigging, removal, relocation and placement of mechanical systems & compressed air
- ✓ Mass Production Facility Design & Line Layout
- ✓ Mass Production Equipment Installation
- ✓ Electrical Service Design & Installation
- ✓ Electrical & Mechanical Infrastructure
- ✓ Compressed Air (LPA/HPA/MPA) Installation
- ✓ Facility Demolition

PRODUCTION LINE RELOCATION

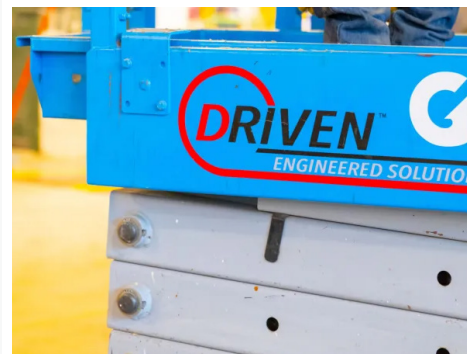

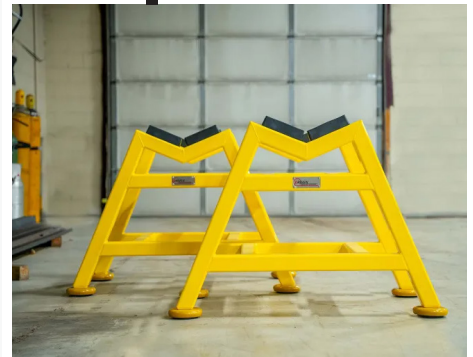

Our Industrial Engineering team offers Production Line Relocation. To relocate a line, we create a CAD layout of the existing line, review requirements for that line, then dismantle and transport the line to its new location. After transporting the line, we perform a site and systems review to confirm utilities and reinstall the line.

FACILITY CLOSURE AND DEMOLITION

We also provide Facility Closure and Demolition. After completing an evaluation of the requested scope of work, we generate a value-added concept and the cost and time requirements to complete the project. We conduct an asset review of your equipment and cross check "sister" plants for usability before relocating assets. Lastly, we disassemble and scrap unused or unnecessary assets before our team returns the building to its original condition.

MAINTENANCE REPAIR & REFURBISHMENT OF EXISTING PRODUCTION EQUIPMENT

To maintain or grow the value of your current equipment, our Industrial Engineering team also provides solutions in Maintenance Repair & Refurbishment of Existing Production Equipment. We repair, emergency repair, and refurbish equipment with current technology and safety upgrades.

FABRICATION

The D-Riven Fabrication team offers solutions in multiple areas, including Returnable Packaging/ Dunnage Racks. Our Eco Rack is a steel-structured packaging solution designed around specific products and processes, enabling a continuous packaging flow between suppliers and end users.

We also provide Bulk Storage Racks, custom-built to hold large quantities of palletized products. These racks are designed based on pallet volume, loading/unloading turn time, and managing customer FIFO (First In-First Out) needs. They can be washed down and meet FDA requirements through hot-dip galvanized surface treatments.

Our designs focus on minimizing storage space and reducing transportation costs. To learn how we can assist your company, call our team at [248-297-5352](tel:248-297-5352).

D-RIVEN FABRICATION SOLUTIONS

- ✓ Design, Engineering, & Fabrication of Conveyance
- ✓ Design, Engineering, & Fabrication of Line Side Dunnage Racks
- ✓ Elevated Platform Design and Engineering
- ✓ Mezzanine Design, Engineering, Stamping, Fabrication & Installation
- ✓ In-House Welding, Shearing, and Laser Cutting
- ✓ Equipment Safety Development and Integration
- ✓ Metal Fabrication & Metal Working

FACTORY FLOOR SOLUTIONS

Our team provides custom Factory Floor Solutions tailored to specific facility needs. Below are examples of D-Riven's Factory Floor Solutions:

Conveyor System Protection: Formed plastic covers attach to conveyors to protect the product on the conveyor line. Covers and brackets are designed to attach and cover the entire conveyor, including corners.

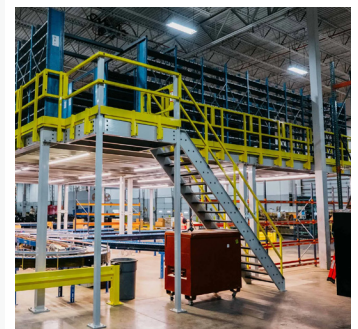

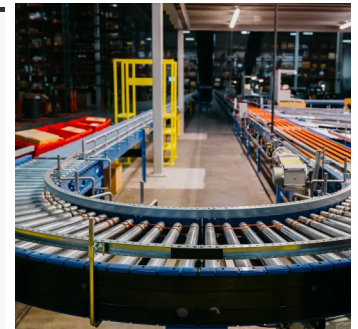

Pump/Equipment Pallets: Structural steel pallets for attaching equipment. These steel pallets are used to allow equipment to be moved, and or, raised above the floor to prevent water intrusion.

Utility Support Stanchion: Supports Water/ Electrical/ Compressed Air pipes and other utility/communication lines above the factory floor. Allows for a flexible manufacturing pace with reduced attachment points on walls and floors.

Specialty Tables: Operator assembly and worktables focused on the product and needs of the operator. Compatible in a standalone format, or complex assembly format. Provides a stable work surface, lighting, and overhead needs for supported tools.

ELEVATED PLATFORM SOLUTIONS

D-Riven also helps create custom equipment platforms and mezzanines. Structured platforms allow for the placement of support and processing equipment so that operations can take advantage of otherwise wasted space. These solutions are typically installed above existing equipment that must be mounted on the ground. When designing mezzanines, D-Riven prioritizes safety and reliability for workers operating on elevated platforms.

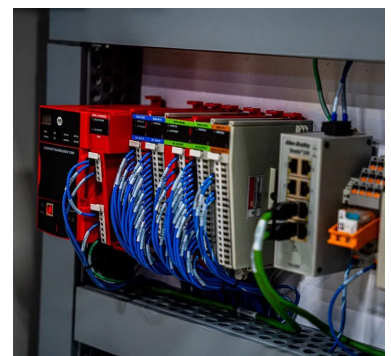

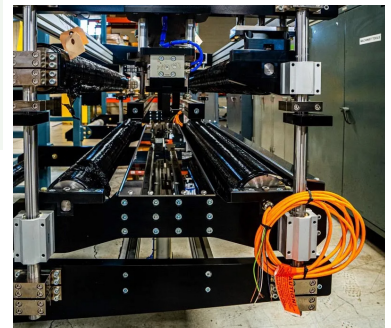

UPCYCLING

D-Riven Upcycling is comprised of highly skilled mechanical engineers, master fabricators, certified welders, and controls engineers capable of transforming old and used equipment into better-than-new condition, with new functionality. This Upcycled equipment is designed to comply with OSHA standards, is functionally capable of meeting the requirements of a new production process, has the latest controls and reporting, and incorporates the safest circuitry—all while being environmentally conscious and meeting corporate sustainability objectives. This process is a fraction of the cost of a new machine and takes less than half the lead time.

All D-Riven equipment is Designed, Engineered, and Fabricated in the United States.

D-RIVEN UPCYCLING SOLUTIONS

- ✓ Equipment Design & Fabrication
- ✓ Equipment Optimization
- ✓ Solid Modeling (SolidWorks)
- ✓ Equipment Up-Cycling
- ✓ Equipment Safety Modification & Updating
- ✓ Speciality Equipment Automation
- ✓ System Equipment Control Cabinet Design and Fabrication
- ✓ System PLC

BENEFITS OF DES INDUSTRIAL UPCYCLING INCLUDE:

Empowering advanced sustainability initiatives

Obtaining maximum value from available resources

Saving substantial time and costs

Creating custom, unique, and personalized products

Finding a productive solution for scrap and overstocked materials

VERTICON BY D-RIVEN

D-Riven is proud to announce that it has acquired the assets of Vertical Conveyance, including its product brand, Verticon™. Verticon specializes in vertical reciprocating and continuous conveyors. Verticon will integrate with the Industrial Fabrication Solutions team at D-Riven to expand the portfolio of products available to our customers and to enhance our offerings for pallet handling, case handling, mezzanines, and conveyance.

D-Riven: Accelerate Achievement!
